

Cage assembly

Model #329P, #429P and #C3624T

Pieces

Disassembled cage

Pan

Feeder

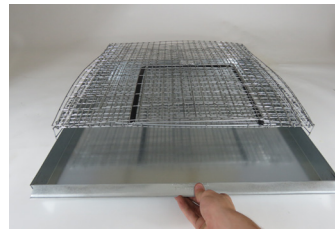

Drinker #605P

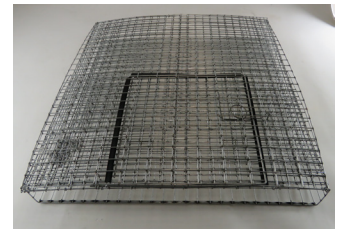

Clip bag

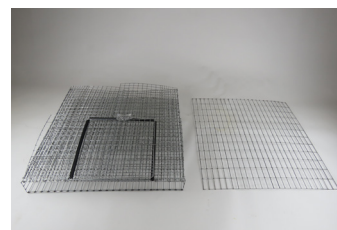

Installation

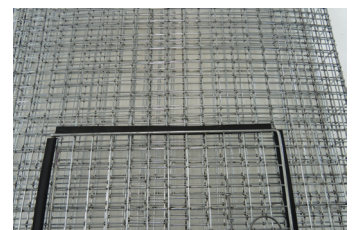

1. Remove the pan from the cage.

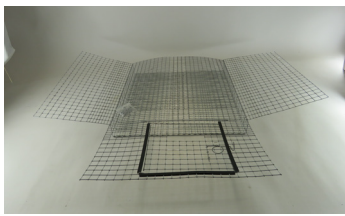

2. Remove the few clips that hold all the pieces using pointed pliers or cutting pliers.

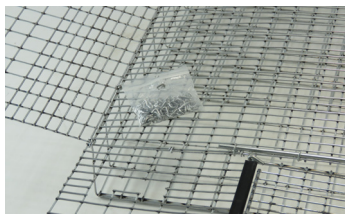

3. Remove the first piece, which will serve as a roof for the cage.

4. Remove the clip that holds the front of the cage.

5. Open the front and both sides so that they are on the outside.

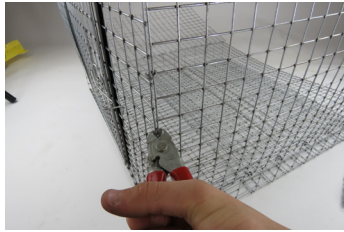

6. Remove the clip that holds the bag containing the staples needed to mount the cage.

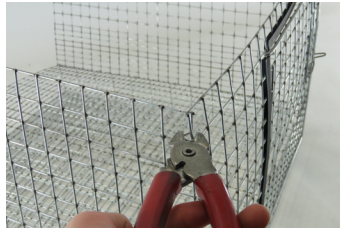

7. Lift up the front and one of the sides and install the staples using round staple pliers, such as models #HP or #601.

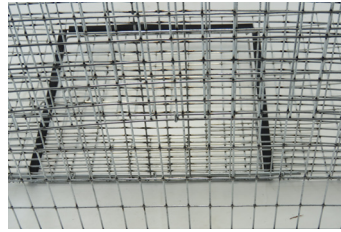

Note: Installing the top staple first will help hold the sides in place.

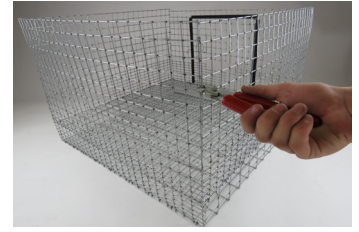

8. Attach the side properly by installing a staple every three inches (7.5 cm).

9. Lift up the other side and install all staples.

10. Remove the clip that holds the back of the cage. It is located underneath the basket that contains the drawer.

11. Raise the back and install staples on both sides.

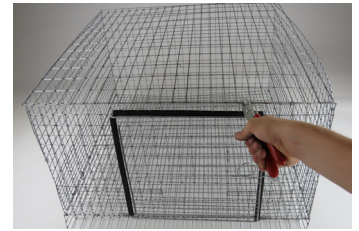

12. Install a series of staples three inches (7.5 cm) from the bottom to retain the floor.

13. For models with legs, repeat steps 1 to 12 for each of your cages. For other models, go to step 15.

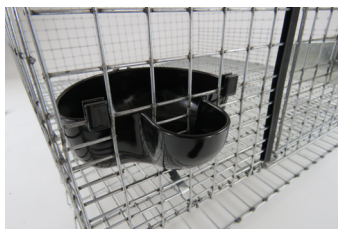

14. Refer to the document for the leg installation (included with the cage) in order to properly install the legs.

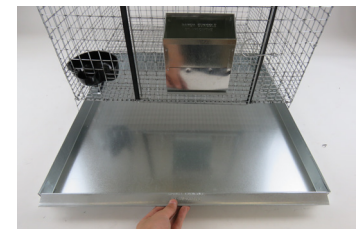

15. Install the roof by attaching staples on all sides.

16. Attach the feeder on the front of the cage.

17. Hang the feeder on the front of the cage.

18. Put the drawer back in the cage.
